

Ever Get A Load Of Bad Fuel?

YES you have !.....If you have Tier anything (?) engines you need fuel that is Clean Diesel ISO standard rather than the fuel from just a few years ago. Fuel has changed and air emission standards have changed drastically over the last few years. Stay tuned.

Look back just 10-15 years ago when injector pressures were maybe 15,000 PSI and compare to the 25,000-30,000 PSE systems today. You'd better have MUCH cleaner fuel or you're gonna' be in the injector maintenance business BIG TIME.

You will need even CLEANER FUEL just 1 year from now!

[The Fuel Purifier \(TFP\)](#)

**Removes up to 99% of water and 90 + % of heavy solids
NO moving parts - BUBBA PROOF - NO replacement filter media
NO magnets, NO BS, NO smoke or mirrors**

FACT: Every time your fuel is transported or stored-even before you get it, it's picked up contamination..water or bio-solids & dirt. By the time the diesel gets to you---even if it looks good in a test jar, it already is and gonna' get more contaminated when it goes into your tanks.

Than it goes into your spotlessly clean tanks...right?

ALL fuels now have bio diesel in them...bio diesel LOVES to attract water and bugs, and dirt.

FACT: Ethanol is soluble in water. WHAT? Oil and water don't mix do they? That's right Bubba....but bio-fuels are not exactly oil....and YES they do mix! Every time your fuel gets transported it gets exposed to more water.....and your fuel collects some of that water. Now What?

The Fuel Purifier (TFP) a filter-less filter or separator that protects and takes the loading off your primary fuel filters. Installed before your primary filters....The Fuel Purifier (TFP) removes free water and dirt before it gets to your filters.

And it never needs changing a replaceable filter element....**EVER.**

And it has **no moving parts**. And it will outlast you and me.

The Fuel Purifier

Locate before your day tanks...or simply in front of your primary filters.
Sizes available from ½ to over 200 GPM....for all engines and vessels of
all sizes. Install before Lunch.....Cleaner Fuel Starts NOW!

See the Fuel Dr. Video from the Workboat Show.

You'll be a believer in less than 1 minute or I'll eat your hat!

[The Fuel Purifier](#) (TFP), a filter less filter or separator that protects and takes the loading off your main fuel filters. Installed before your filters The Fuel Purifier (TFP) removes water and dirt from your fuel BEFORE it gets to your filters.

- TFP Has no moving parts
- TFP needs no replaceable filter media--NEVER
- TFP is drop dead simple and easy to install
- TFP improves operational safety by protecting filters
- TFP BUBBA Proof!
