

## Stop paying for oily water disposal that is almost all water with very little oil.

Finally a compact [oil water separator \(OWS\)](#) for workboats, designed to fit small spaces and small budgets. The [MINI-Brute OWS](#) will not allow over limits oil discharge and has the USCG approval to back that up.

At less than 1/3 the size and 1/2 the cost of ALL previous oily water separators, the MINI-BRUTE is purpose built for workboats and the small spaces.

At less than 30" x 40" the Mini-BRUTE can be bulkhead mounted almost anywhere and give you safe & legal discharges of your bilge water.

The MINI-Brute is a complete system including 24VDC or 10V pump that runs at 1 GPM, simple controls, and most importantly...the USCG approved oil content monitor (OCM) that logs your last 18 months of discharges. The MINI leaves no doubt and an indisputable record of what you've been putting overboard.

The MINI is quality built here in the USA, by an ISO shop that builds the best-toughest marine oily water separators in the world.

Now with modern solid state controls and the newest world class [oil content monitors](#), you can have a trustworthy oily water separator in a small form package for small space at small prices. Right now the MINI-Brute is available in 1 GPM units...but in the next month after testing for approvals we'll also have the 5 GPM MINI-Brute ready to roll out.

No where else in the world---can you get a USCG approved OWS for under \$7500.
